Simple: the **average** of a sine is zero. Power is proportional to voltage squared: \$ P = \dfrac{V^2}{R} \$ so to get **average** power you calculate **average** voltage squared.

Fourier Series--Square Wave . Consider a square wave of length . Over the range , this can be written as If the waveform is a pure sine wave , the relationships between amplitudes (peak-to-peak, peak) and RMS are fixed and known, as they are for any continuous periodic wave . The ideal square wave contains only components of odd-integer harmonic frequencies (of the form 2π(2k – 1)f). Sawtooth waves and real-world signals contain all.
